NEWS RELEASE

Teijin Receives Approval for Additional Indications of XEOMIN® for Cervical Dystonia and Blepharospasm in Japan

Tokyo, Japan | Frankfurt, Germany, June 19, 2026 --- [Teijin Pharma Limited](#), the core company of the [Teijin Group](#)'s healthcare business, and [Merz Therapeutics GmbH](#), a leading player in neurology-focused specialty pharma, jointly announced today that Japan's Ministry of Health, Labour and Welfare (MHLW) has approved the additional indications for XEOMIN® (incobotulinumtoxinA) for the treatment of cervical dystonia and blepharospasm. This approval represents the fourth and fifth indications for XEOMIN® authorized in Japan, alongside its existing approvals for the treatment of upper limb spasticity, lower limb spasticity and chronic sialorrhea.

Cervical dystonia is a focal dystonia characterized by involuntary contractions of the neck muscles, resulting in abnormal or repetitive movements and postures.¹ Blepharospasm is also a focal dystonia, characterized by excessive involuntary contractions of the muscles surrounding the eye.² Both conditions significantly impact patients' quality of life.

The approval by MHLW is based on Phase III clinical trials conducted by Merz Therapeutics across multiple countries in Europe, North America and Asia, as well as Phase III clinical trials conducted by Teijin in Japan. In clinical trials, XEOMIN® has been shown to reduce involuntary muscle contractions by inhibiting the release of acetylcholine from cholinergic nerve endings. XEOMIN® contains incobotulinumtoxinA as its sole active ingredient and is produced by removing complexing proteins during manufacturing using technology developed by Merz Pharma GmbH & Co. KGaA.

Masaki Taneda, President of Teijin Pharma Limited, said, *“ Teijin Pharma has set a long-term vision of becoming a company that helps address the challenges faced by patients, families, and communities who require greater support, with a particular focus on rare diseases and other difficult-to-treat conditions. We are pleased that this approval for additional indications will allow us to offer an additional treatment option for patients whose daily lives can be significantly affected by these neurological conditions. Our continued collaboration with Merz Therapeutics has played an important role in achieving this milestone, and we will continue working together to further expand the potential of XEOMIN® for the benefit of patients. ”*

Stefan König, CEO of Merz Therapeutics, said, *“As a specialist neurology focused company, we are committed to advancing treatment options through rigorous clinical development and strong, sustained partnerships. This approval reinforces the value of our collaboration with Teijin Pharma and our shared focus on addressing unmet needs in neurological conditions worldwide, including Japan and ultimately helping to bring better outcomes to more patients.”*

XEOMIN® is approved in 79 countries worldwide for therapeutic and/or aesthetic indications, and in 76 countries for the treatment of cervical dystonia and blepharospasm, as of April 2026. Teijin Limited signed an exclusive license and co-development agreement for XEOMIN® with Merz Therapeutics in 2017 and launched exclusive sales of XEOMIN® in Japan in December 2020 after obtaining manufacturing and marketing approval.

XEOMIN® is the registered trademark of [Merz Pharma GmbH & Co. KGaA](#).

About the Teijin Group

Teijin (TSE: 3401) is a technology-driven global group with two core businesses: high-performance materials and healthcare solutions.
